2: Mountford E-ɔ (1954) 1958
OI20 Tiwi OI20

412 short, cylindrical stick, about three-sixteenths of an inch in diameter. This was dipped in the colour and transferred to the painting surface with the brush held as in Fig. 2B.

FIG. 2. *Methods of Holding Brushes*

4. THE ARTISTS

531 As with other aboriginal groups with whom I have worked in Central and
[463] Northern Australia, there is no special artist class; all aboriginal men and
[302] women of the Tiwi, would, on occasions, be required to paint designs on the bodies of one or another of their relatives, or on objects, particularly those associated with the *pukamuni* ceremony.

Some men, however, were looked upon as being more skilled than others in some particular field, i.e., cutting and decorating the burial poles, or the ceremonial spears, painting the large bark baskets, or the bodies of men and women who take part in the *pukamuni* or *kulama* ceremonies.

On Pl. 1 are four men who were regarded as good craftsmen and artists.

Pulanimbuwi (Pl. 1A), hard-working and meticulous in all he did, produced the unusual *pukamuni* pole (Pl. 35); two other poles as human figures (Pl. 37A, B; 37E, F), and a number of bark paintings; Pl. 13B, D, and Pl. 14C, D, being typical.

Inbidjarmeri (Pl. 1B), being fully employed by the Superintendent of the nearby settlement, was unable to make bark paintings for me. He was most expert in carving and painting the beautiful, multi-barked ceremonial spears. Pl. 32B is his work. He was also in great demand for decorating the performers for the *pukamuni* and *kulama* ceremonies. Pl. 28K and Pl. 28B are examples of his craftsmanship in this field.

115 *Tjamalampua* (Pl. 1C) and *Malumerinita* (Pl. 1D) are two men to whom I
